DETAILED ACTION

This Office Action is in response to the RCE filed 13 February 2006.

Claim Rejections - 35 USC § 112

The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

Claims 22-31 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the written description requirement. The claim(s) contains subject matter, which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention. Claims 22-31 discloses the associated capacitor (first stage capacitor) has a voltage dependent capacitance under a given applied voltage and has a different structure, a low resistance and a large area in comparison with at least one of the other capacitors of the subsequent stages. This limitation is new matter.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

Art Unit: 2822

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 22-26 and 29-31 , as far as understood, are rejected under 35 U.S.C.

102(e) as being anticipated by Applicant's Prior Art (Figures 1 and 4).

Applicant's Prior Art (Figures 1 and 4) discloses a driver for driving a load with a secondary power supply voltage (V_o (15V)) obtained by stepping a primary supply voltage level (V_{cc} (3V)) using a charge pump circuit (11) that has a multiplicity of stages ($C1-C_n$), each of the stages including a switching element (Sw (Fig. 4)) and a capacitor(C), wherein an associated capacitor (first-stage capacitor) ($C1$) of the first stage is energized by the one voltage (3V) impressed on the capacitors of the multiplicity of stages that is closest to the value of the primary supply voltage level, where the primary supply level comprises the primary power supply voltage level and where the primary supply voltage is stepped up to provide the secondary power supply voltage and each of the stages is stepped up stage (Fig. 4 (the voltage is stepped up)) and where the associate capacitor (first-stage capacitor) has a lower internal resistance than the capacitors of the subsequent stages.

Response to Arguments

Applicant's arguments with respect to claims 22-31 have been considered but are moot in view of the new ground(s) of rejection.
